Insulation Materials

Beautiful Colors and Designs

Sense Doors create a smooth and soothing indoor environment through distinctive textures and colors. Each of their natural wood patterns exude natural beauty.

Characteristics

ABS Door's Characteristics

Natural Wood Patterns

Various wood patterns can be reproduced since it uses PVC moldable ABS sheets and Korea's wood pattern lami films.

Excellent Durability

It does not suffer moisture-induced deformation nor does it suffer the exfoliation of sheets.

Excellent Shock Absorption

It does not suffer damage to the lami film of exfoliation since its shock absorption capacity is better than that of an ordinary wrapping door.

Door Frame

PVC Foam Door Frame

It exhibits better mechanical strength and twist resistance since it consists of a reinforced structure that integrates foam PVC and Korea's lami films. It comes in various colors and natural wood patterns since it is wrapped with Korea's lami film. It exhibits excellent workability and deformation and load resistance. It is an eco-friendly product made of renewable materials.

Adjustable Frame Door

It has maximized the strengths of PVC

It comes in various colors and patterns tailored to our customer's tastes since PVC foam is wrapped with Korea's lami films. It does not become twisted or warped by moisture.

Excellent Workability

It can be easily installed since it can be freely adjusted according to changes in the thickness of interior walls (minimum: 110mm, maximum: 245mm). It minimizes the defects that can be caused by different manufacturing processes during installation since the main door frame and non-main door frame are installed separately.

It is Easy to Maintain and Repair

It is easy to maintain and repair since the main door frame can be separately replaced and installed in cases of repair or renovation.
